

Diversity in the Living World - The living World - Taxonomy, Systematics and Taxonomic Categories

Systematics is a branch of science which deals with identification normal creature classification organisms. This is what we mean when we use the word text now let us come to the other word that is systematics. This word was first used by Linnaeus in his book.. systematics means peck tsunami and the relationship organisms which are in this cattle.. Linnaeus is also known as father of Linneus,. he is known for the systematic hierarchy or in this orderly manner variety was dropped. It was not included so when we arrange them the top host or the biggest group is the kingdom. So if we talk about kingdom say I 'm looking down all animals whichever group category they are they are going to be in this big category that is thinking they 're in the kingdom..
