

Today is my study day like my full weekend study day and I thought it 'd be fun to show you guys how I 'm studying. I did just do a video on like my study process but I know for me personally I like to see the actual doings if that makes sense. I think a lot of the changes that I 've made to not only like my notes but also just like the way my mentality about it have really helped. What I usually do is I start the lecture and just take notes like they tell you to do in your book. I will then condense the information in the book into my notes and so that really seems to help so I 'm just showing you here I usually use like a red or green pen and just exact write down exactly what they 're telling you to write down. Becker is taking a break from studying. Becker says he is sick of studying these days are like the best and the worst at the same time. Becker: "I'm just gon na answer a few questions show you guys kind of what it looks like if you 're new to Becker and we'll just move right along"

I finished all the materials so now all I have to do is kind of review my notes and then do the simulation. I 'm planning on really reviewing the material before I do the simulations taking the simulations extremely serious and trying to print somehow print all the simulations and keep them at a binder so that I can review those as well as my notes. I definitely plan on going back this time around and like actually redoing the simulations in the Becker software. I just thought I 'd give you an update I am going to like do like a voiceover for the parts that you probably already saw just because I was in Dunkin Donuts and they have the music blasting which normally does not bother me because I have headphones in anyway and I kind of like the music but I felt like it would be really annoying for me to like be talking and having the music going at the same time if that make sense. I'm going to go through my notebook there 's quite a bit of pages here which will kind of see how it works taking as much notes as I thin it seems like it helps with the multiple-choice. I think that's gon na be crucial for when I go back to actually review for the actual audit exam so here I'm just kind of flipping through getting an idea of what I 'm gon na have to like remember for this chapter. I think again the markers and the color coordinating is really going to make it easier to pinpoint all of the important information on each page aight guys so I "m gon na start working on my simulations. I use these Erin Condren little sticky notebook bark takes things and I just wrote sim on the little tab so it cooks out
