Booming Bulls

Anish Singh Thakur, a financial analyst, has given his opinion on forex and crypto trading. He believes that bitcoin is on an up trend, and that nifty is also on an up trend in the weekly time frame. He also believes that bitcoin can come to \$28,000 if it closes in the weekly chart. Bitcoin's biggest fall came recently when the coronavirus was in the news. These are the levels for you, Anish Singh Thakur says, for bitcoin to look at itself: in front of you. The same can be said for ethereum, he says, not in the habit of talking too much like bitcoin does. However, he does mention one or two times where bitcoin can go plus and rest everything else going minus may be Cardano and Solana can go plus too. All crypto markets will follow bitcoin, he predicts.

This is not like every day - this is different type of video. I haven't given any levels yet, so I'll show you one. Australian dollar/Canadian dollar can you see Canadian dollar becoming weak in front of Australian dollar? In both charts, what do you say currency? In this also, it is a secondary currency breakout. Hasn't come. I think this is a nice situation which we can grab because only in this video am I giving you levels. Make sure you like the video because it really matters to me and crypto and forex traders comment as well comment your views about what is happening with you, how is it going, and what do you want because most of the content is stock market related but what do they want? Please tell topic what you want, and I'll make a video on that.

[02/03, 2:03 am] Mukul Thakur: Cryptopanic is a website that regularly posts news stories about cryptocurrency. The most important and trending news stories are highlighted on the left side of the website. One important update that was recently posted is that Cardano (ADA) has achieved the highest weekly closing value. Ethereum (ETH) also had an update, with some people suggesting that it may be time to start option trading on the cryptocurrency. Cryptopanic's view on Ethereum is that it is still bullish after the recent price drop. They recommend that traders who want to do quick trades take advantage of this opportunity by watching their video trading strategies. Swing traders need to have a bias in order to make successful trades, according to Cryptopanic.

The spread of bid ask is 4196. Its market price is 4195. It has liquidity meaning obviously if you are coming with million dollars and there is less liquidity. But I know, if you are trading with thousands of dollars then it's good enough liquidity. You can buy this and trade it. And guys, do open an account in Delta exchange. And after opening it, do send your ID on Crypto @ boomingbulls.com so that I have your record.

Booming Bulls

Let's start this video where I am giving 23 pairs related to Forex. They are in good positions in all the time frames and I will also give you the update of what is happening in the cryptocurrency. According to me, the market can go bullish right now as well. I have already made a long position. AUD/CAD is a 4 hour time frame time frame. It is very beautiful double top. It has been consolidated for 3 days. The new Zealand dollar versus the US dollar is consolidated wholly. Ethereum or Bitcoin all of them are actually going bullish as you can see. I
