

learn together how to study about a company from its annual report. We'll even dive deep into its financial statements and understand what is important look into what is that to be ignored. Technical analysis helps you understand the price start of a company in a good enough way so that you will have or know when is a good time to invest into the company. The last traded price is what we see on the screen as the price of a stock so if you go into any trading terminal as you can see here every second, the price keeps on moving every second. When would the price of a stock move down when there is huge supply that that is when the number of sellers are more and the demand is very less number of buyers are less so there are a lot of people who want to sell this stock but no one is willing to buy only so the sellers would say, "Okay now we'll lower the price at least then you buy." But then some buyers would start buying, and the price would start moving down. This you understand because of demand and supply - price keeps moving up or down.

The stock market can experience a sudden increase in price because market sentiments can change. For example, in 1997, there was a sudden increase in the price of stocks due to the dot-com bubble. In 2015, there was a sudden increase in the price of stocks due to the Yellen effect. I always take examples and stories to teach you, so let's take an example here. The stock market normally moves only because of demand and supply. However, what defines demand is these two reasons. There are two types of buying a stock, the primary market transaction and the secondary market transaction. In the primary market transaction, the share most of the company's ownership into your remat account directly. There is nothing more a broker sits in between and helps you go with the whole IPO application and allotment. When you buy a stock, it comes from other people in the market. It's called there is no volume or liquidity in the market; you would not be able to buy at all if there was people willing to sell it. When that order gets matched, the shares of Mahdi and Mahindra move into your bmat account. The settlement period of the market is t plus one, which is when you buy your stock today. You will get its delivery tomorrow only.

The sixth and final segment of this notes to measures your performance. When you invest in the stock market, you need to know what your return on investment (ROI) is. Otherwise, what is the point of investing in the stock market? Speaking about calculating your return on investment of one stock investment, there are two ways to do this. The rookie way is to do it a lot of people do like that, and that is not the right way to do it. The second method, which I am going to explain today, is how it should be done. Use a cagr method in order to calculate your return on investment. That is the best way to do it so that you can compare it with other benchmarks. Of time also comes into this calculation right- did you do the calculation? I will help you. You can go to Google and type in cagr calculator website will come up. Just put in the values
