

Lec 00: C++ complete course | Content Overview | C++ tutorials for Beginners

i apologize to those who were waiting for java course but the good news is i am apparently i'm preparing java classes right after you know you will get familiar with c plus. After you have completed like basics of c plus plus then parallely we can start java classes. i'll keep it as a beginner friendly course like if you do n't know anything abcd of coding then you can easily grab the concept. C plus plus programming language is object oriented programming language not purely but yeah it is why so because it follows the object orientation programming those uh concept abstraction polymorphism encapsulation classes and objects these concepts. in this course right let's see so this is what we are going to cover the main main main topics i have written over there firstly we will see the basics right like see as you know c plus plus is object orientation. The theory is very important like you have to do practice also i'll try to give a practice problem in every lecture after every lecture and we'll see the solution also in next lecture. In every version we will discuss the history of c plus plus programming. We'll discuss how to install this or maybe you can be ready with install everything like vs code and compiler.

i'll try my best to keep this course simple also i'll try to cover basics to advanced level concept right from scratch in simple language. Get ready with all your weapons for this battle right so that's it for this video now and i'll see the next video till then bye take care.
