

Linus Beta had four language options which he could choose for nomenclature. They were Latin, Greek, Sanskrit and Arabic... These three languages are spoken in some or the other part of the world, but Latin is a dead language.. these scientific names are not going to collide with any of the name used in any part of world, for example, Mango as Manji Farah Indica. underlining is very important and this becomes the next rule cello so write it okay so next rule says if the names are music printed then printed, they will be in italics. However, if hand written then it should both the names should be separately underlined clear to everyone yes or no yes. I hope this is clear rules of nomenclature and organization is clear to each and everyone okay. Very good now let 's proceed further now coming back to taxonomy what is taxonomy. Taxonomy is the branch of science which deals with the principles and procedures of classification..
