

A single line comment starts with two slash and anything written in front of it. It does not run along with the code.. comments are the lines in a code that are not executed. While the program is run. So a single line comments are very useful when you 're writing a code to make your code readable. after these slashes anything written is not executed when I 'm going to run. The program also now what do you do if you want to make this whole part of the code not functioning do you add two slashes in front of everything or you can use a much simpler method that is multi multiline comments. to create a consonant array. You just need to add a square bracket plus a second separated by commas. And now we have the names of the laptop as an array which by the way. can not be changed or undefined through your throughout your code.. conditional statements are used to perform different actions based on different conditions..
