

Best Data Structures & Algorithms (DSA) Course - Clear Any FAANG Interview!

Kunal Kushwaha

In this video, I am excited to share that I have created a free course on data structures, algorithms, and interview preparation that has gained over 1 lakh subscribers in just three months. The course covers everything you need to know to prepare for coding rounds, online coding rounds, and technical assessments. It also includes custom implementations of all data structures and algorithms and covers interview problems from big tech companies such as Google, Facebook, Amazon, and Microsoft. I have personally used this approach to clear all my Google interview rounds and have received multiple offers. The course is available for free on my YouTube channel and has received positive feedback from thousands of viewers. I recommend Java for this course, but it can be done in any language. The quality, quantity, and content of this course make it the best option available on YouTube for free right now.

In the video, I talk about a data structure and algorithms bootcamp that can help you prepare for a Fang interview in just 60 days. I mention that the course covers important topics such as link lists, stacks, queues, trees, heaps, hash maps, graph theory, dynamic programming, and more. I also emphasize that no prerequisites are required and that the course is completely free. Throughout the video, I stress the quality of the course and mention that it's the only one on YouTube that lives up to the hype. I give advice on how to clear coding interviews and mention that testimonials and FAQs are available on our website. I provide links to our community, newsletter, and socials and encourage viewers to subscribe to get notified of new courses and bootcamps. I also mention that I have received many job offers from top companies around the world.
