

react app to create a basic react app. That contains a react file structure, which we will attempt to comprehend.

```
import React from 'react';

class MyComponent extends React.Component {

  constructor(props) {

    super(props);

    this.state = {

      count: 0

    };

  }

  handleClick() {

    this.setState({ count: this.state.count + 1 });

  }

  render() {

    return (

      <div>

        <p>You clicked the button {this.state.count} times.</p>

        <button onClick={() => this.handleClick()}>Click me</button>

      </div>

    );

  }

}

export default MyComponent;
```
