

introduction of python:

we are going to learn Python programming From zero to job ready. Python is a dynamically typed Object oriented programming language. According to me Python is the easiest learned programming language. There are many more programming languages in market. But this course is going to be dedicated to Python. And this is because Python is very easy. Python is a high level programming language. Guido van Russom started working on it in 1989. Python is Dynamically typed. General purpose programming language which support object oriented paradigm. It also supports functional approach. After that you start doing things , Then you have fun at a different level. Installing python in local is also very easy. Simply on any platform Simply you can install it. And if you are on mac It is easy installation as you can see on computer screen. So by installing Python Just pay attention to one thing If you are installing in your computer Path variable @ Python 3. which ever version it is There is option as path Definitely check it.
