

What is Software Engineering and its Evolution in Hindi with examples

Gate Smashers

Software engineering is a systematic, disciplined and cost-effective technique for software development. Software engineering not related to how to code,. It is a whole approach to develop a software. Engineering approach is also known as Engineering approach.. Branded companies do their work in a proper way like from the place which I belong to. Non branded things have build and deliver method. That means they have made a thing and delivered it And after that even if it works for 2 kilometer OR. It's works for 200 kilometers IT is possible. I am telling this from my personal experience that you used that Jeep locally a bit But if you take it on a long drive. It is finished And on the other side. If you talk about branded Then, They have followed all the steps properly in branded. There were many famous [UNK] conferences where first time software. Engineering was named. AT that time. The maximum crisis time was 65-85 This. Is known as software Crisis Why is it actually called as Crisis? I am telling you that point only That branded and non-branded in one. You can say that I am following a complete approach But. At that time there was no approach. They were simply following the build and deliver kind of method..

After 1990 the time of Internet came and during this time all softwares that were there Even if we still talk The most famous is your Windows, Microsoft Windows, Microsoft Windows That is a system software which we also call as operating system. IT also came during that time. After 2010. The current time is of [UNK], machine learning, deep learning, where we are using the concept of self-learning in software..
