

VS Code is an IDE that allows you to edit your source code.

Notepad for Python programming

If you write half name of a function, Notepad will display it. This makes Python programming easier. Notepad can be used as a tool for Python programming.

Advantages of using Notepad

- Easy to use
- Easy to understand
- Easy to learn

Visual Studio Code is an advanced version of Notepad with extra features to make programming easier. It installs quickly, but it's recommended to wait a bit.

Windows PowerShell is used as the terminal. Just write `python` and it will display the version information. To exit Python, type `exit()` with parentheses.

You can use any OS, including Linux and Mac. To check the Python version, just write `python version`. It will display the version number.

Pip and PyPy can be used for Python programming. You can download it from [pythonqtqtqqqtqtqxqtqtgui](#) and [pythonversion](#) websites. They are available for installation to test the latest version of Python.

```
pythonqtqtqqqtqtqxqtqtgui pythonversion
```

The code itself is available for download and testing again.

The version has transformed transformerqq
