

Cleaning Up Existing Website Code using Chat GPT's Suggestions

If you have existing website code, Chat GPT can analyze it and make suggestions on how to clean it up. No need to rewrite the entire code, just tell Chat GPT what you want to fix and it will give you suggestions on how to improve it. For example, Chat GPT may suggest adding a new class called product row inside of the product row inside of your website.

Five Different Concepts for YouTube Thumbnails

Mystery Unrevealed: a magnifying glass hovering over an AI-generated artwork with a faded image of source code in the background

Digital Grid: showcasing the AI's decision-making process on a digital grid with a digital panel

The Artist is Shown...: showcase the artist's background and the creator of the concept

Black Outline: using a black outline to frame the subject and create a sense of contrast with the background

Blue Filter: adding a blue filter to the image to create a futuristic feel

Chat GPT's Decision-making Process when it Comes to Website Design

Chat GPT can provide suggestions on how to improve the design of your website. For example, it may suggest adding a new product row within the existing product row without having to rewrite the entire code.

New Ideas Suggested by Chat GPT

Chat GPT can generate new ideas for videos based on popular trends and topics. Use these ideas to create new content for your channel and increase views.

Chat GPT: Your Grammar Checker, Spelling Checker, and Readability Checker

Chat GPT is a powerful tool that can help you in various ways:

Summarize long articles into bullet points

Provide pros and cons of products

Debug or fix a broken website

Build websites from scratch

This is just the tip of the iceberg. If you want to see more, check out my video on how I built an entire game with GPT4, and how it can help you create complex programs with ease.
