

Introduction to Programming & Python | Python Tutorial - Day #1

CodeWithHarry

Welcome to 100 Days of Code

In this course, we will be learning Python programming from scratch to job-ready level in 100 days. By dedicating 100 days to this program and following the byte-sized lessons, you will master Python programming.

Python is a dynamically-typed, object-oriented programming language created by Guido van Russom in 1991. Its name was inspired by a TV show named Monty Python's Circus, which Guido was watching at the time.

What to Expect

As we progress through the videos, we will start with the basics and move on to advanced topics. At first, you may find Python to be quite
