

click on "Preferences". Under "Appearance and Behavior Appearance", you can change the theme to a darker color if you prefer.

- To create a new project, click on "Create New Project".
- Name your project. For example, "Graph".
- Under "Interpreter", select Python version 3. If you are on a Mac, Python version 2 is already installed by default. If you are on a Windows machine, make sure to select Python version 3.
- Click "Create" to create your project.

Now you have your Python project up and running!

Creating Our First Python Program

In this tutorial, we will learn how to create our first Python program. We will start by creating a new Python file and naming it "app".

1. Open the draft folder and right-click.
2. Select "New" and then click "Python File".
3. Name the file "app" and click "OK".

Now that we have our Python file open, we can start typing in some code. Let's start with a very basic "Hello World" program to demonstrate the syntax:

```
print("Hello World")
```

This program will simply print the words "Hello World" to the console when executed.

To write a basic Python program, we will use the print function to output "Hello World" to the screen. Here's how:

```
print("Hello World")
```
