

2) Smog: Smog is a blend of smoke and mist or different gases when respond within the sight of daylight. The impacts of exhaust cloud on human wellbeing cause for respiratory, bothering to the eyes, sicknesses connected with nose, throat, bronchitis, pneumonia, migraine, nerves, liver, and kidneys.

The main brown haze related passings were kept in London in 1873, when it killed 500 individuals. In 1892, December, London had most awful encounters causing 1000 passings. In 1940's serious exhaust cloud started covering the urban areas of Los Angeles in USA.

3) Acid rain: Acid downpour has become quite possibly of the main worldwide ecological issue and postures critical unfavorable effect on soils, streams, lakes, backwoods and landmarks. The peculiarity happens when SO_x and NO_x from the consuming of non-renewable energy sources, for example, Petroleum, Diesel, Coal and so on join with water fume in climate and fall as downpour or snow or haze.

Normal sources like volcanoes, backwoods fires, and so on additionally contribute SO_x and NO_x. Expanded metropolitan and modern exercises cause air contamination bringing about the ascent of convergence of SO₂ and NO_x. Sulfur dioxide and NO₂ consolidates with water fume in the air produce sulphuric corrosive and Nitric corrosive separately and results corrosive downpour. A portion of the models are:

Europe and portions of W Asia have encountered downpour with water pH scope of 4.5 to 5.0 (acidic) in 1958.
