### HPV Article Opinion

Reading the article "Lead developer of Hpv vaccines comes clean, warns parents young girls it's all a giant deadly scam" it is apparent to me that the pharmaceutical companies are not doing their due diligence with moral accountability and instead are being driven by shareholders and profits. This is backed up by the National Vaccination Information Center confirming two virologists filing a lawsuit against their former employer, Merck. These virologists reported to witness improper testing and data falsification that would artificially inflate the vaccines efficacy findings. The pharmaceutical company Merck has vigorously marketed the Gardasil vaccine as protection against cervical cancer, in doing so they have given women and young girls a false sense of security.

Learning that the cervical cancer risk in the U.S is already extremely low and that 70% of HPV infections resolve themselves, is eye opening as a woman. Based off this information alone it's really infuriating that they are marketing and pushing parents to give their young children a vaccine that doesn't last but also puts them at harm from the side effects. These side effects consist of paralysis, lupus, seizures, blood clots and inflammation. None of these health risks from this vaccination equate in my mind to being protected. Without actual evidence that the vaccine prevents any cancer I have a hard time trusting in a vaccine that has been exposed to be a complete sham.
