

18.what is the use of session?

The `session` in PHP is used to store and manage user-specific data across multiple requests. It allows you to store variables that can be accessed and used throughout a user's session on your website. This can be useful for maintaining user login status, storing shopping cart information, or tracking user preferences

19.Which attribute is used for multiple selections in select tag?

The `multiple` attribute is used in the `` tag to allow users to select multiple options from a dropdown list. When this attribute is added to the `` tag, users can hold down the Ctrl (or Command on Mac) key while clicking on the options to select multiple items. This is commonly used when you want users to be able to select multiple choices, such as selecting multiple categories or multiple items from a list.

20.What is the purpose of break statement?

The `break` statement in PHP is used to exit a loop or switch statement prematurely. When the `break` statement is encountered, the program flow immediately exits the loop or switch statement, and execution continues with the next statement after the loop or switch. This can be useful when you want to stop the execution of a loop or switch based on a certain condition, or when you want to exit a loop early if a specific value is found.
