

Well, that's information about the meaning of renewable energy, complete with its types, sources and benefits. I hope this information is helpful.

Renewable energy has become a major topic of discussion in various countries in recent years. This started with a meeting of various member countries of the United Nations (UN) at the 21st Conference of the Parties (COP) in Paris in 2015 which gave birth to the *Paris Agreement*. The essence of the agreement is to jointly restrain the increase in the earth's temperature.

In order to realize this, various efforts have been made, one of which is to encourage the use of renewable energy.

What Is Renewable Energy?

Renewable energy is an energy source that is available by nature and can be used continuously. This is in line with the statement of the International Energy Agency (IEA).
