

- Tertiary sector has grown within the last ten years which affects the agricultural and manufacturing sectors negatively.

The relative importance of each sector within countries

Primary sector

Importance:

- **Developing Countries:** In most developing countries, the primary sector is the largest sector. It is the major provider of raw materials and employment to a majority of the populace in these countries.

Developed Countries: In the case of developed countries, the contribution of the primary sector is generally small because the economic activities are focused on manufacturing and services. On the other hand, it provides raw materials to the other sectors.

Secondary sector

Importance:

- **Developing Countries:** With the rise in industrialization, the secondary sector possesses greater importance in countries. It is a great manufacturer and helps provide opportunities for work, which promotes economic growth by making infrastructural development stronger.
- **Developed Countries:** In most of the developed countries, in general, the secondary sector is very advanced with high value and technology incorporations in manufacturing, and it usually complements the service sector with finished goods.
