Referring to websites such as WebMD, Mayo Clinic, Medline, and UpToDate I was able to rule in and rule out diagnosis based on presentation and patient symptoms.

4. What specific feedback from previous case studies has your faculty identified that you plan to incorporate on future cases to avoid pitfalls in data gathering or decision making? What will you do differently to improve?

*Make sure any references are also listed on a separate page in your references.

I am still working on conducting a focused exam versus being nervous to miss anything. My skills on developing a differential diagnosis are slowly improving. The suggested system was only integumentary in this case. I was confused because I thought the immune system is involved causing an allergic reaction in the body. It is still a challenge for me to select the appropriate diagnostic tests for each individual diagnosis. With time and practice I am learning and developing a system.
