

Ciliated epithelial cells are found in the trachea and the bronchi and the goblet cells create mucus which is a sticky liquid and this traps dust and germs. And the Cilia which are hair like structures on the ciliated epithelial cells move the mucus upwards towards the gullet in which it is then swallowed and the lungs are kept clean.

Red Blood Cells

Red Blood Cells carry Oxygen and they have a biconcave shape which allows them to store as much oxygen as possible and their cytoplasm mainly contains haemoglobin.
