

**Solubility Rules:**

(whether an ionic compound can be dissolved in water)

1. Classes of SOLUBLE COMPOUNDS
  - a. Compounds of the alkali metals (1A)
  - b. Ammonium ( $\text{NH}_4^+$ ) compound
  - c. Nitrates ( $\text{NO}_3^-$ ), chlorates ( $\text{ClO}_3^-$ ), perchlorates ( $\text{ClO}_4^-$ ) acetates ( $\text{CH}_3\text{CO}_2^-$ )
  - d. Chlorides, bromides, iodides
    - i. EXCEPT:  $\text{Pb}^{2+}$ ,  $\text{Ag}^+$ ,  $\text{Hg}_2^{2+}$
  - e. Sulfates
    - i. Except  $\text{Sr}^{2+}$ ,  $\text{Ba}^{2+}$ ,  $\text{Pb}^{2+}$ ,  $\text{Ca}^{2+}$ ,  $\text{Hg}_2^{2+}$ ,  $\text{Ag}^+$ 
      1. Last three are slightly soluble
2. Classes of INSOLUBLE COMPOUNDS
  - a. Carbonates, phosphates, oxalates, chromates
    - i. EXCEPT: alkali metals,  $\text{NH}_4^+$
  - b. Sulfides
    - i. EXCEPT: alkali metals,  $\text{NH}_4^+$ , alkaline earth metals
      1.  $\text{CaS}$ ,  $\text{SrS}$ , and  $\text{BaS}$  are slightly to moderately soluble
  - c. Hydroxides and oxides
    - i. EXCEPT: alkali metals, alkaline earth metals
      1.  $\text{Ca(OH)}_x$  and  $\text{Sr(OH)}_2$  are only slightly soluble,  $\text{Mg(OH)}_2$  is only very slightly soluble
