Quantitative Reasoning

1. The McLoone Index is the ratio of the total amount spent on pupils below the median per-pupil expense in a group to the amount that is needed to raise all of the pupils to the median expense in the group.
    a. The ratio divides the summation of all below the median by the median multiplied by the number of pupils below the median.

Ex.

Number of Employees	**Salary**
2	1,000,000
4	200,000
6	100,000
6	60,000
8	45,000
12	24,000
