

4. The most common Native American language used in 2010 is Navajo, with about 169,000 people speaking the language nationally. If there are about 308.7 million people in the United States, what fraction of people speak Navajo? Write the ratio of these two population numbers as a decimal and percent.

5. In 2000 Michigan had a population of 9,938,444. The number of people living in Michigan decreased by 0.6% in 2010. What was Michigan's approximate population in 2010?

6. The population in Rochester, New York, was 219,773 people in 2000 and 210,565 people in 2010. By about what percent did the population change? Did the population grow or shrink? Write the percent as a decimal.
