

Sharing Sites

Sharing sites are sites that share files public or private of data between computers. File sharing allows multiple people to view or read the file at once without changing it. The public version of file sharing is like Facebook where emotion and live stories are stored or YouTube where music and viral videos can be seen. The private part of file sharing is cloud service; these are storage companies that host the data to the internet and let you access it from anywhere.

The cloud service are really helpful because you have unlimited space but you have to pay for what you want and is way cheaper comparing price per GB

Although higher capacity of clouds tend to be slower and internet is required if you connect to a cloud. Also you have the pay per month and if you do not pay you lose everything
