

Forms of pollution and their solutions

- 1) *Acid Rain* – Caused by burning fossil fuels, which change the pH of rainwater in clouds. Solution is to create electricity from wind, sun, tides and nuclear energy.
- 2) *Human Waste* – Caused by sewage and refuse can cause major health problems if not dealt with properly. Solution is to recycle, and using incinerators to produce electricity and sewage to produce methane gas. Also people could stop dropping litter.
- 3) *Eutrophication* – Caused by nitrates and sewage which kills fish in streams and rivers. Solution would be to have better sewage treatments.
- 4) *Radioactive pollution* – Caused by nuclear power stations producing waste materials (carbon). If humans come into contact with it then they could be killed, cancer or have genetically mutated children. Solution would be to re-use the waste and store the rest of it.
