

dangerous to even go outside during the day time but affect our entire eco-system. According to the National Geographic News more than a million of earth's plants and animals will become extinct due to global warming. This is worrying because humans depend on plants and animals for survival. Natural disasters such as droughts and hurricanes will increase in number and severity. Also, sea levels worldwide will rise, as a result; floods will increase, drinking water will become contaminated, farming will be affected as there will be not be enough fresh water for crops, coral reefs will die taking along with it majority of our sea life population, and our economy will be affected.

Global warming caused by greenhouse effect not only results in environmental changes, but threatens the very existence of our civilization. It is an issue that continues to plague our earth, and will only become more severe if the need for urgent action is not recognized. We should live by the laws of the four "R": Reduce, reuse, recycle and replenish. If we don't save it no one else will.
