

# OSPF

Wednesday, December 02, 2015 9:03 AM

The most Popular interior protocol is called OSPF.

OSPF	Open Shortest Path First
------	--------------------------

- Uses IGP
- Uses Link State Protocol

OSPF works by you configuring your router for the protocol. Once Two routers using OSPF are linked together, they immediately start sending Link State Advertisements. They start communicating about what networks they are connected to.

There is always a Designated Router which is the "Boss".
