

What is the job of the stomata?	These allow carbon dioxide into the plant cell.
What is the organic farming alternative to pesticide usage?	Biological control.
Why does a plant convert glucose (product of photosynthesis) into starch?	It can be stored more easily and it will not dissolve in water.
Why does a plant have a thick waxy cuticle?	To prevent water loss.
Why do plant cells have a transparent epidermis?	To allow light to pass through it to get to the cells.
