

Lastly, Cerner Corporation is also an EHR system that stays up to date with the rapid changing of health care and works to improve the health and happiness of communities and individuals. Cerner connects the individuals who use this system to over 18,000 facilities over the world, and that helps to support the organization's clinical, financial, and needs. Cerner's technology is made to help individuals manage and engage their populations because of the systems technology. Cerner has an easy to use technology since they think of physicians when updating their technology. Since their technology is easy to use, it will help them to better focus on their patients, their career, and will help them to still be able to manage their everyday routine. Overall, Cerner mainly focuses on the health of patients and the knowledge of the individuals using the system so they have an easy to use system and that helps individuals focus more on patients and work, and less time to take out of their days to have to learn how to use a new system.

The EHR system that I would pick to use would be Meditech. The main reason that I would use Meditech would be because it seems to be the system that is the most customer and patient friendly. I like how Meditech is there for customers every step of the way, until they are fast with the system and are professional at how to use it. Meditech would make me feel like I was being supported and would help me to be determined to become the best that I can at using Meditech. The individual one-on-one training would help me out a lot, and that is another reason why I would prefer to use Meditech. I learn better when I am learning hands on, and the training would help me understand the system. Especially since the training is one-on-one, I would feel like I was being understood and that my knowledge on the use of Meditech was actually important.
